

A modern outdoor living space featuring a large, minimalist fireplace with a white, textured, triangular chimney. The fireplace has a long, low profile with a dark wood base and a white stone surround. A fire is burning in the hearth. To the left, there is a light-colored, modular outdoor sofa with several cushions. In the center, a round, dark-colored coffee table with a thick top and a rounded base holds a small white bowl and a book. The floor is made of large, light-colored stone tiles. In the background, there are large rocks, some potted plants, and a wall with a large abstract painting. A modern light fixture with two adjustable arms is mounted on the wall. The overall aesthetic is clean, modern, and sophisticated.

NVS1200 | NVS1800

REAL  FLAME

Real Flame Nuvo is a room sealed decorative gas fireplace range, designed to suit modern building styles. Available in 1200 and 1800mm size options, this fireplace can be configured in 4 different viewing styles to suit each type of installation. Traditional open-fronted fireplaces require significant fixed ventilation to ensure proper operation – the room sealed nature of this appliance ensures smooth operations without the requirement of fixed ventilation in the room. The range is compatible with Natural Gas, LPG, and ULPG, making a decorative gas fireplace accessible to as many clients as possible.

Allowing unsurpassed ambiance in any space

Nuvo range comes with unparalleled fuel bed options that are true to its heritage. The fuel beds are inspired by branches gathered from the mountains surrounding Real Flame's base in Melbourne, Victoria- following a storm in the region.

To enhance the aesthetic integrity of the range, Nuvo is offered standard with anti-reflective glass, ensuring the client's focus is on the relaxing flame as it interacts with the enchanting fuel beds. The back of the firebox is clad with vertically ribbed ceramic panels as standard, but clients have the option to choose SCHOTT ROBAX Magic Black glass for additional visual impact.

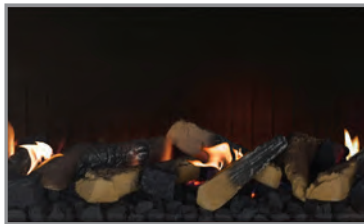

Safety and Simplicity with Power-Balanced Flue

Real Flame Nuvo is equipped with Power-Balanced Flue technology to create a closed loop system where combustion air is drawn from outside the building, avoiding all requirements for fixed ventilation and protecting against environmental changes in the building into the future e.g. the addition of upgraded kitchen or bathroom extraction. The Power Balanced Flue system has been designed to give the ultimate in flexibility by extending the maximum possible flue run to distances never seen before in a Real Flame product.

MEDIA BED OPTIONS

Alpine Forest

Nordic Pine

Redgum and Coals

River Gorge

Tasman Shoreline
